TEST PLAN DOCUMENT

STREAKIFY – Consistency Tracker | Manual Testing Project

1. Document Control

Item	Details
Document Name	Test Plan
Project Name	Streakify – Consistency Tracker Web Application
Testing Type	Manual Testing
Prepared By	R.Kasiveni
Date	18/10/2026

2. Introduction

2.1 Purpose

The purpose of this Test Plan is to define the testing strategy, scope, approach, resources, and schedule for validating the Streakify – Consistency Tracker web application. Testing will focus on the user-facing features and the modules available in the application.

2.2 Scope

This Test Plan covers manual testing of the web application's visible interface and available functionality, including account access, daily tasks, consistency/streak tracking, progress views, and responsive behaviour. Optional or feature-gated items will be tested only if accessible in the test environment.

3. Test Strategy

3.1 Types of Testing

Testing Type	Description
Smoke Testing	Verify that the application opens and its main pages are accessible.
Functional Testing	Validate available features against expected behaviour.
Integration Testing	Validate interactions between related features, where available.
System Testing	Test end-to-end user flows through the application.
Compatibility Testing	Check browser and screen-size compatibility.
UI Testing	Validate layout, alignment, labels, buttons, and visual consistency.

3.2 Test Levels

- System Testing
- Functional Testing
- Integration Testing (where applicable)

4. Test Environment

Item	Details
Application Type	Web Application
Application URL	https://streakify-consistency-tracker.vercel.app
Environment	QA / Test
Operating System	Windows 10/11
Browsers	Google Chrome, Microsoft Edge

5. Test Scope

5.1 In-Scope

- Application launch and landing page
- Sign up and login flows, if available
- Daily goals / task cards and completion status
- Streak and progress display
- Daily or long-term goal tracking, where available
- Navigation and button functionality
- Input validation and error messages
- Responsive layout on desktop and mobile screen sizes
- Data persistence after refresh, where supported

5.2 Out-of-Scope

- Internal implementation and source-code review
- Database-level testing without authorised access
- Third-party service internals
- Formal load, stress, and performance testing
- Native Android-only features that are unavailable in the web version

6. Entry & Exit Criteria

6.1 Entry Criteria

- Test environment and application URL are available
- Test data is prepared
- Test cases are prepared
- Test plan is reviewed

6.2 Exit Criteria

- All planned test cases have been executed
- Critical and high-severity defects have been logged
- Failed test cases have been retested where fixes are available
- Defect summary and test summary reports are prepared

7. Suspension & Resumption Criteria

7.1 Suspension Criteria

- Application is unavailable or crashes repeatedly
- Test environment or required network connection is unavailable
- A blocking defect prevents further execution

7.2 Resumption Criteria

- A stable application build is available
- The test environment and network connection are restored
- The blocking issue is resolved or an agreed workaround is provided

8. Test Deliverables

- Test Plan
- Test Scenarios
- Test Cases
- Test Data
- Defect Reports
- Test Execution Report
- Test Summary Report

9. Defect Management

- Defects will be recorded in an Excel sheet or agreed tracking tool.
- Each defect will include ID, description, steps to reproduce, expected result, actual result, severity, priority, and status.
- Screenshots or screen recordings will be attached when useful.
- Fixed defects will be retested and relevant regression tests will be executed.

10. Roles & Responsibilities

Item	Details
QA Tester	Prepare test cases, execute tests, record results, and report defects.
Developer	Analyse and fix defects, then provide an updated build for retesting.
Project Owner / Reviewer	Clarify expected behaviour and review test completion.

11. Test Schedule

Item	Duration
Test Planning	2 Days
Test Case Design	3 Days
Test Execution	5 Days
Defect Retesting & Regression	2 Days
Test Summary	1 Day

12. Risks & Mitigation

Item	Details
Requirement or feature changes	Confirm the currently available features and update test cases when requirements change.
Environment or network issues	Retry testing when the environment is stable and record any blocked cases.
Limited access to account-only features	Use authorised test accounts or mark inaccessible cases as Blocked / Not Run.
Time constraints	Prioritise critical user flows and core streak-tracking functionality.

13. Test Metrics

- Test case execution percentage
- Pass / Fail / Blocked ratio
- Defect count by severity and priority
- Defect retest status

14. Tools

Item	Details
Test Case Management	Microsoft Excel / Google Sheets
Defect Tracking	Excel / agreed issue tracker
Browsers	Google Chrome, Microsoft Edge
Evidence	Screenshots / screen recordings

15. Assumptions

- The application URL will remain accessible during testing.
- The tester will have access to any required test account.
- Only features visible and accessible in the test environment will be evaluated.
- Actual outcomes will be recorded after executing the test cases; no result is assumed in advance.

16. Test Closure

- Testing will be closed when all exit criteria are met, the planned tests have been executed or formally marked as blocked, and the Test Summary Report is prepared.
